

Step 46 · Daily Vending

Frequently Asked Questions

How do I find a place to park and sell coffee?

Look for a real buying occasion, then contact the person who controls the site. Workplaces, markets, shops, and community venues can be starting points, but traffic alone does not mean sales. Visit during your intended hours and check access, competing options, fees, and utilities. Confirm both property permission and local vending requirements. Agree on a limited trial, publish a dependable schedule, and compare the whole visit's costs with what it earns.

How should I secure grinders and equipment for travel?

Use a restraint plan designed for the equipment, vehicle, and travel forces. Owners report both fixed mounts and protected transport cases, along with damage from makeshift arrangements. Ask the equipment maker and a qualified vehicle or load-restraint specialist to check mounting points, restraints, weight, and access for cleaning. A power cord, loose crate, sink, or improvised strap is not proof of securement. Inspect the arrangement before travel and follow applicable transport rules.

How do I get permission to put a coffee cart at a hospital?

Ask the hospital who manages food-service vendors or concessions, then describe the proposed location, hours, menu, and setup. Existing contracts may limit outside vendors. Obtain written site permission and complete the hospital's process, alongside the applicable government approvals. Leaving a flyer or receiving no reply is not permission. The entrance, grounds, and a nearby public street may have different decision-makers.

Should I buy ice daily or make and store my own?

Compare the full routine: purchase price, collection time, storage, transport, cleaning, and equipment upkeep. Buying from an approved supplier can keep the setup simple; approved production and storage may suit dependable volume. Measure your use and melt loss before choosing capacity. Ice is food: protect it from contamination and use clean, suitable containers and scoops. Confirm local sourcing and storage rules; a home or garage setup is not automatically acceptable.
